Donna,

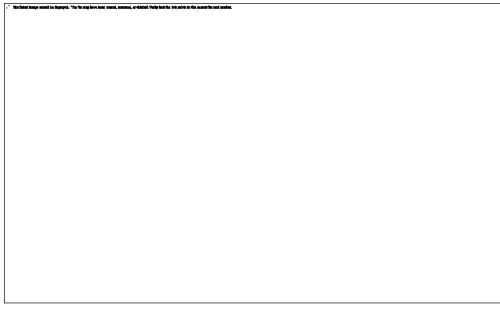

Good afternoon. Following up on our phone call this morning discussing shipping soil to USE using our post treatment TCLP data for Pb and Cd from the segments we have onsite. Our segments are approximately 33 tons. If we use 300 tons (9 segments) for approval to ship. We will send USE post treatment analytical results from 3 representative segment results from the 9 segments/~300 tons tested for TCLP Pb and Cd showing the soil is below regulatory levels. I have attached lab data to start us off showing results for 6 segments that would represent approximately 600 tons of material we wish to ship. I assure you that all segments tested and shipped to USE are below regulatory levels for Pb and Cd our contaminants of concern.

Each segment is being treated with a 3% addition (1 ton) of Enviroblend CS to stabilize the Pb and Cd.

Nonresponsive based on revised scope hope I have explained this well to you. Please let us know if you have any questions.

We'll wait to hear from you. If all good with USE, we are estimating that we may continue shipping 8 trucks per day to you through Wednesday 4/8.

Thank you

No job is so important and no service so urgent, that we cannot take time to perform our work safely.
